

# **Individuell reflektion**

2021-04-30

Hanna Schaff

## **1 What do I want to learn or understand better?**

As discussed in earlier reflections I've wanted to work on my programming. I feel like I've learnt a lot so far, not only in programming but also about the Scrum process. I do, however, still feel somewhat unsure about some things, such as error handling and code quality (e.g. how to know which errors to handle and the consequences of not handling them). I think it's a good idea to focus some discussion (with next week's programming partner) on those points.

## **2 How can I help someone else, or the entire team, to learn something new?**

This week I wrote the code and shared my screen. I think my programming partner and I were on an even level, however they didn't participate in conversation as much (I talked mostly). This is something I'm realizing now as I'm writing. I will strive to be more attentive to my programming partner next week (if they seem to understand more, I might ask to be the one coding to increase my learning, and if they seem to understand/participate less I might ask them to be the one coding, or perhaps switch for each sessions).

## **3 What is my contribution towards the team's use of Scrum?**

We've continued to update the Scrum board, and when necessary we have expanded the sections in the board. We are all actively using the board and participating in the scrum process and I think that is just as it should be.

## **4 What is my contribution towards the team's deliveries?**

This week I also (in my assigned pair) delivered according to plan. We did encounter some problems that we maybe should have asked the rest of the team for help about earlier, and we forgot to test one important function before showcasing for the PO, however everything critical has been implemented and the necessary fixes will be relatively quick to do.
