Individual reflection
2021-03-27 (week 1)
Hanna Schaff

In this first reflection, I will write mostly from the perspective of the project as a whole (rather than just this week).

1 What do I want to learn or understand better?

In this project as a whole I mainly wish to work on my programming skill. I want to get more familiar and comfortable with coding. The course's focus on the agile work method and project management will surely be interesting to learn and useful in the future, however I think I have more experience and skill with administrative type of work, so it will require less effort than the coding. I plan on being attentive to my own progress and to make sure I ask those with more experience when stuck or unsure about what to do.

2 How can I help someone else, or the entire team, to learn something new?

In terms of concrete programming knowledge I know there are others that know more than me in the group. So I'm hoping to work together with others to learn new things relevant to the project and provide the assistance I can to further our collective learning.

3 What is my contribution towards the team's use of Scrum?

We have not decided responsibilities for the project and we don't plan on doing it, so the responsibility of following the Scrum method will be evenly placed on all of us. I have kept up with the lectures and will keep up with future lectures to ensure I know the scrum method and what is expected of us.

4   What is my contribution towards the team's deliveries?

So far we've only had a few start-up meetings, which I've participated in. During the project we will divide the work and I will, of course, strive towards completing my assigned work.
